Loneliness Rates among Undergraduates from 2008 to 2022, according to Data from the National College Health Assessment

Eunji Shin, Khanh Bui, & Joshua H. Park

Loneliness is defined as the aversive perception of a discrepancy between one’s desired and actual social relationships in either quantity or quality.

Findings
1) A majority (over 50%) of undergraduates are lonely
2) Loneliness rates are increasing

Acknowledgements
We thank Dr. Mary Hoban, Chief Research Officer at the American College Health Association, for providing data that we requested. We thank Christine Kukich, Senior Research Analyst at the American College Health Association, for answering our questions. We thank Katy Carr, Associate Vice Provost of Pepperdine University’s Office of Research, Grants, and Foundation Relations, for research funding. We thank Emilie Chai, undergraduate psychology student at the University of California, San Diego, for proofreading and feedback.
